Art Unit: 2859

DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: In the specification at page 3 lines 6+ "four grooves 110" are described, however, only two grooves are shown, at page 3 lines 8 and 9 "Vertical rod 106" is described as being inserted into "grooves 110a", however, the rod is shown as being inserted into grooves 110a and 110b, at page 3 lines 17 and 18 horizontal rod 104 is described as being inserted into grooves 110b, but that is not shown in the figures.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:
The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 5-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 5 recites the limitation "said rectangular shape" in line 1. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

ol

Art Unit: 2859

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Steele in view of Schreiber.

The device as claimed is substantially disclosed by Steele in figure 1 shows a scale on a computer monitor, but lacks the scale being an add on attachment to an existing monitor and two intersecting rods to locate an exact point on the monitor and the various attaching means and materials claimed for the frame.

Schreiber teaches using an add on device including two intersecting rods to locate an exact point on a word processor. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use an add on device including two intersecting rods on the monitor of Steele as taught by Schreiber to locate an exact point on the monitor screen.

With respect to the attaching means and materials of the frame that is attached to the computer monitor, it is old and well known to attach frames of various materials by various attaching means (such as a glare guard which is held by friction over the monitor) to existing monitors for added after market features. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use various plastics, metals, or woods with various attaching means such as friction, magnets, adhesive etc in the combination of Steele and Schreiber as common materials used in add on features to existing monitors.
